

Title: Learn more about the ETHNA system project
Thu, 21/01/2021 - 12:00

ERRIN is an associate partner in the ETHNA system project, which aims to develop and apply an ethics governance system for the use of Responsible Research and Innovation (RRI) in higher education, funding and research centres. As the project works to institutionalise a system that manages ethics in research and innovation, it has released its [second newsletter](#) on its progress.

The newsletter features a spotlight on RRI, a concept that proposes to change the science and technology system through more transparent and participatory processes where responsibility is shared by different actors. ERRIN continues to work on [RRI](#) through its new project [RIPEET](#), which will support RRI policy experimentations for the energy transition in three ERRIN regions.

Learn more about the ETHNA project's progress in the newsletter, which you can read [here](#).
